NFPA Standards

APPENDIX D.2: EVALUATING FIRE APPARATUS

The consistent, objective and timely evaluation of fire apparatus is a critical function for any fire department. Fire apparatus, after all, is just another type of machine, and all machines have a finite life-cycle.

Appendices D.2 provides the objective criterion that fire departments should use to evaluate whether an apparatus is still fit for duty. Here's a look at some key factors.

- Vehicle road mileage.
 - Engine operating hours.
 - The quality of the preventative maintenance program.
 - The quality of the driver training program.
 - Whether the fire apparatus was used within its design parameters.
 - Whether the fire apparatus was manufactured on a custom or commercial chassis.
 - The quality of workmanship by the original manufacturer.
 - The quality of the components used in the manufacturing process.
 - The availability of replacement parts.
- In the past two decades, critical enhancements in design, safety and technology have been added by manufacturers in response to changes in NFPA 1901 and customer demands.

25 Year Old Truck

- Called G L Leblanc for information regarding a 25-year inspection and waiting to hear.

Price Comparisons

- 1996 Ford Simon, gas powered Sale Reduced to \$10,000
- 1989 KME Fire hawk, Diesel powered, priced at \$4,683
- 1990 Ford 153, Automatic, priced at \$9,500 (Quebec)
- 1987 International S1954, Diesel, priced at \$7,827 (Most closely designed)
